What is Equity?

Vi Viphawee - 2026-04-22 - [Comments \(0\)](#) - [Basics of Trading](#)

Equity represents the real-time value of your trading account.

It reflects your account balance adjusted for any open trades.

□ Equity Formula

Equity = Balance + Unrealized Profit/Loss

Where:

- **Balance** = Funds in your account excluding open trades
 - **Unrealized Profit/Loss** = Floating profit or loss from open positions
-

□ Why is Equity important?

- It determines your **available margin**
- It affects your **margin level**
- It influences **margin calls and stop-out levels**

Equity changes in real time as market prices fluctuate.
