What is Technical Analysis?

Vi Viphawee - 2026-04-22 - [Comments \(0\)](#) - [Basics of Trading](#)

Technical analysis is a method of evaluating financial markets by studying **price charts and technical indicators** to forecast potential future price movements.

□ What does it focus on?

Technical analysis examines:

- □ Price trends
- □ Support and resistance levels
- □ Chart patterns
- □ Indicators such as Moving Averages, RSI, and MACD
- □ Trading volume

The underlying principle is that historical price behaviour and market patterns may help identify potential future movements.
