What happens during volatility or flash crashes?

Vi Viphawee - 2026-03-07 - [Comentarios \(0\)](#) - [Trading Conditions](#)

During periods of extreme market volatility or flash crashes, trading conditions may change rapidly.

You may experience:

- **Slippage** (orders executed at a different price than requested)
- **Requotes**
- **Widened spreads**
- **Temporarily disabled trading** on certain instruments

Why does this happen?

High-impact events such as:

- Major economic news releases
- Geopolitical developments
- Sudden liquidity shortages
- Unexpected market shocks

can cause rapid price movements and reduced liquidity.
